

2026 Stadiums - Linkin Park

 **Greetings:** Hello friends, it's good to see you again. Welcome to the Linkin Park 2026 Tour! We appreciate your partnership in making each show a safe, smooth, and memorable experience for everyone involved. This rider outlines our requirements and expectations to ensure a successful production. Included near the bottom of the page is our document library. Please review the information carefully and communicate any concerns or challenges well in advance. Our team is committed to collaboration, and we appreciate your attention to detail.

 **Safety:** Safety is our top priority. We require all venues and personnel to comply with local, national, and industry safety standards. The Event Safety Alliance guidelines should be followed at all times where applicable. Key safety requirements include:

- A promoter provided designated safety officer on-site for the duration of our load-in, show, and load-out. This person will coordinate with our touring safety liaison, Simon Conway, of TESS ([The Event Safety Shop](#)).
- We will require a copy of your engineering sign off on all structures and loads, as well as your high-wind action plan and your weather action plan as part of our overall safety documentation library. Please also include any emergency action plans, show stop plans, and shelter in place plans.
- Our risk assessments and method statements, along with any relevant engineering will be made available.
- Emergency action plans detailing safety responses to major incidents and including clearly marked evacuation routes.
- Secure and stable staging, rigging, and barricades that meet industry standard and engineering specifications.
- Daily safety briefings with the local crew before operations begin.
- Compliance with all OSHA and/or local jurisdiction regulations.
- We expect the use of PPE on all those working in the event environment during the construction load in and load out phase of the day. This includes hardhats on everyone working on the floor during the rigging period, and high viz while the forklifts are operating. The tour carries it's own PPE for its staff, we expect the venue to provide it for local labor.

 **Security:** A comprehensive security plan must be in place to protect the band, crew, and audience. Requirements include:

- A dedicated, vetted security team assigned to artist areas.
- Controlled access to all backstage and production areas.
- Bag checks and metal detection for all personnel entering restricted zones.
- Coordination with local law enforcement and medical teams.
- An emergency response plan provided to Linkin Park's security director in advance.

- Promoter and venue should ensure the ready-availability of medical services from the commencement of load in until the conclusion of load out.
- Our comprehensive security rider and supporting documentation can be found below in the document library. </aside>

 **Overview:** The tour is carrying the full production, with the exception of locally provided technical support risers, some power distribution, and barricade. Please find the link to the overall stage technical production package included in the document library below. In our collective effort to help keep the work areas clean, please place 4 large **EMPTY** and bagged trash cans at the rear of the stage, and 2 at FOH, these should be in place at the start of the load in.

 **Communications:** We'd like to keep our communication lines clear. Please see the subject line naming convention in the document library below. We require separate email communication threads for each department to ensure the correct people are included for the necessary information.

 **Load in:** The show requires every available hour to complete load-in in time for doors. Our arrival time to each stadium city varies from show to show, let's be sure to agree on the best plan for making use of the venue availability. This will be different case to case.

Rigging: This rigging information is preliminary, each stage will be plotted separately with Art the rigger. These details are only a guide. The show is weighing in at approximately TBC **kgs** on TBC points, TBC of which are 2-ton motors. Please find the rigging documentation linked in the document library below. All rigging advance conversation should be directed to **Art McConnell**, his details are included above. For the mark-out call, please include the local rigging lead, their #2 person, plus 3 ground riggers. Rigging labor is *estimated* as **8 up over 4 down**, venue specific adjustments will be identified in the rigging advance^{**}.^{**}

 **Internet:** Dedicated and unrestricted high-speed internet hardwire lines, provided by the venue are required at the following locations:

- Production office minimum 200/200mbs up and down - this should be live at the start of the load in
- Dressing Room compound 50/50mbs - this should be live at the start of the load in
- Stage Right near video village 50/50mbs - this should be live by 13:00 the day prior to the show. If fees are required to provide these services, the tour should be notified of that in advance for consideration and a determination of use.

 **Trucks & Buses:** We are in 23 trucks and 7 buses, including one merch truck and two artist buses. Buses & trucks will require shore power and parking, to be identified during the advance dialog. These numbers do NOT include any support act accommodation.

✂ **Labor:** Detailed in the advance dialog and specific to each venue's unique needs. See link below to access our generic labor calls for this arena version of the show. Please send us your labor rate sheet at your earliest convenience. **Production Runners:** Our production coordinator Tori Merrick will be advancing the runner requirements with your team. This does not include support act needs **Load in Day: Call times & runner requirements will be based on load in times and distance from hotel to venue** (4) Production runners for hotel > venue transport and runner duties (15 pax vans) (4) Production runners for venue > hotel transport and runner duties (15 pax vans) **Show Day: Call times & runner requirements will be based on load in times and distance from hotel to venue** (2) Production Runner at 8am in 15pax van (1) Production Runner at 12:00pm in 15pax van (1) Production Runner at 2pm with 15pax van **Band Chef Labor & Runner:** (1) Catering runner with cargo van / minivan (no passenger vans) from 9am-9pm on load in day & show day (1) Band Chef Assistant who has kitchen knowledge from (10am - 10pm) on Show Day

🚧 **Barricade:** The tour requires venue-provided, safety rated, and well maintained barricade. This will be installed and struck by a house provided team according to house requirements for safety.

⚡ **Power:** The show requires a total of 2600amps 240V three phase. Please see the power distribution document included below. **Cable Ramps:** We require the below cable ramp runs. These should have a large center cavity to account for our larger-width cables. Additional house-provided feeder will require additional cable ramps. (2) 5-channel cable ramp runs from Downstage Edge straight to each FOH (SL & SR). (1) 5-channel cable ramp from FOH to FOH structures to connect them together. (1) 5-channel cable ramp from "slash" camera position to nearest cable ramp or FOH. (this run can also be completed using barricade lines) For shows with (4) delay towers, we need (1) 5-channel cable ramp from near delays to far delays.

🏗 **Locally Provided Plant:** The tour will require (6) forklifts total: (5) 5-ton forklifts with native 6' (1.8m) blades (not extensions) See "**Labor Calls**" in the document library for venue-specific plant needs and timing.

📦 **Gases:** (TBC) 20lb non-siphoned CO2 Canisters.

📖 **SFX:** We use multiple lasers, CO2, hazers, and confetti during the performance. In the document library below you will find the laser safety packet along with operator certifications and all necessary safety information.

🏠 **Staging:** We rely on a locally provided stage and require the space identified in the staging document included in the document library below. The Tour will carry the onstage riser package, lighting skids, and the rail-cam riser to be used in the downstage right barricade. The thrust and b-stage height is 1.2m. We are ok with the elevation transition from the stage to the thrust to be either stairs or ramped staging. We will discuss in the advance.

🏠 **FOH Requirements:** Our ideal is split FOH positions, however, if venue needs require otherwise we are able to adjust to a single FOH position to accommodate. Each FOH should be

minimum 6m x 6m in size (20' x 20'). SL FOH (Audio) should be as low to the ground as possible. SR FOH (Lighting, Video, SFX) should be at 2' (.6m) height. Both FOH positions should be aligned so that the center line of each FOH riser is targeted to downstage center. Ideal offset from downstage center is 50m to the centerline of each FOH position and 15m to 17m offstage of the field centerline to the onstage closest corner to center of the FOH risers.

 **Delay Towers:** Delay towers will be provided by the promoter, we are carrying delay tower audio & spotlights. If the venue requires (2) total delay towers, they must be able to accommodate 3 separate hangs. If the venue requires (4) total delay towers, they can be standard 2-hang delay towers.

 **Locally provided riser requirements:** Will match our camera plan. (4) Camera platforms: 1.22m wide by 2.44m long by stage height high (1) Positioned inside of each FOH barricade, along the inside edge of the FOH platform = (2) total (2) Positioned in "slash" positions SL & SR, ideally along the barricade line

 **Backstage:** We will require secure access to all available rooms backstage, see included backstage rider information. Backstage and hospitality to be advanced with Linkin Park's Backstage Coordinator, Skot Harris. Please ensure that we have access to a back of house washer and dryer for our exclusive use on the day. Details for everything back of house and dressing rooms are included in the document library below.

 **Dressing room hallway:** We require the area outside the main dressing rooms to be a sterile environment. Any and all meetings and interactions related to the principals will be conducted outside of the dressing room in the "family room".

Tour Washers and Dryers: The tour will be carrying washers and dryers. They require TBC power, a water source, and a drainage location. Please have a power disconnect located at the preferred location for use.

 **Catering:** The tour is relying on locally-provided high-quality catering. Our catering requirements are included in the backstage/hospitality rider linked in the table below. LP Touring Team size: 92 crew including bus and truck drivers + band party of 14. Band party only adds 8 people to the catering numbers for the dinner meal. Please ensure you confirm the total catering count per city when advancing catering with our Backstage Coordinator Skot and our Production Coordinator Tori. Currently, our numbers do not include the support act. Artist catering will be provided by the tour chef exclusively. Please see band chef requirements and local catering rider below in the production details dropdown.

 **VIP / LPU / Early Entry:** Linkin Park and their audience community are in active communication together frequently. As such we offer a number of opportunities to enhance their experience on show days including an early entry program, radio station promo programs, and VIP experiences. We are dedicated to creating positive experiences for our audience and are grateful in advance for your staff's positive interaction with them as well. Please see detailed information about these programs included in the document library below.

 **Weather Protection:** The Tour requires weather protection for all gear on-stage and at the FOH platforms. Please have visqueen readily available for tour usage

 **Support acts:** The tour is not carrying any of the elements required to accommodate the support acts.

 **Photo/Film Release:** In the document library is the LP Photo/Film Release in English. This release needs to be translated to the local language, then printed in both English & the local language. These need to be displayed for public view prior to ALL ticket scanning checkpoints / entrances.

 **Logo:** In the document library is the current Linkin Park Logo. Please use this logo if you plan to distribute/print anything LP branded that hasn't officially been sent via our marketing team.
