

We are obliged to ask for your collaboration to meet the requirements that Madrid Council and Madrid Government have been demanding to reduce sound emissions within WiZink's surroundings

The extraordinary situation of the venue, right in the heart of the city, have the well known advantages, but also the limitations set by the sound effects on the neighbour's buildings. So far, with adaptation and investment measures along with several neighbour's meetings, we've deal with it, but we're now in a point that really forces us to act to avoid the serious effects we've been warned.

In the last weeks, several acoustic impact studies have been done. And there's an acoustic measurement equipment set inside the building, and one more at the outside to be able to control and make the necessary adjustments

WiZink center is located in a legislatively área where the maximum level of noise transmission is 60 dB A daytime (7 to 23h) and 50 dBA at night (23 to 7h)

These levels correspond to a just 5 second average of integration, which are quite restrictive.

To avoid reaching those levels at the outside and also avoid penalties, a global maximum dB A level has been set and a low frequency range limiters (from 40 to 100 Hz in 1/3 octave). This frequency range, usually provided by sub amps, generate next building's vibration when reaching some levels.

On our side, we've install acoustic protection on the outside Wall joining our venue with the closest building and we're soundproofing the external áreas. But all these actions will be useless if you don't help us adjusting your sound

It's because of that, we're forced to take the following action points, following the acoustic engineering studies's results, for we ask for your help and collaboration:

MAXIMUM LEVELS do not exceed in shows and sound check.

- $L_{Aeq-5s} \leq 105 \text{ dB A}$
- $L_{Aeq-5s} (40, 50, 63 \text{ y } 100 \text{ Hz}) \leq 102 \text{ dB}$
- (maximum at any of the frequencies)
- Soundcheck should never start before 10:00 h. nor finish later than 21:00 h.

Our homologated measurement equipment is at your sound engineers disposal so that, they can track their acoustic effects and make the necessary adjustments. We'll set the measurement console next to the sound console.

These acoustic limitations Will be detailed in the renting contract, as Madrid Council compels us to, so please, inform about this point to every incoming productions.

We're counting on you, as allways, to help us solving this situation that could have serious consequences for the WiZink Center.
